

1 Requirements

The purpose of this integration guide is to describe the process of integrating the C-CURE 9000 access control system with the exacqVision VMS system.

Software version requirements:

- exacqVision Server version 5.4 or later with Professional license
- C-CURE 9000 version: 2.2 or later*
- HDVR driver version 2.2.44.14 (to become exacqVision driver)

*C-CURE 9000 version 2.2 requires a special exacqVision license from Software House at no extra cost. Future releases of C-CURE 9000 will not require this special license and will have integrated support for exacqVision VMS systems.

2 Installation

C-CURE 9000 should be installed and run on computer other than the exacqVision server. With the HDVR driver, the C-CURE 9000 installation can be integrated with the exacqVision VMS. Ensure that the user performing this installation has administrator privileges on the computer.

The software and user guides for the installation and integration of C-CURE 9000 and its integration to exacqVision VMS systems are available at <http://www.swhouse.com/support/SoftwareDownloads.aspx> (an account is required to access that information):

- For installing C-CURE 9000, see “C-CURE 9000 Installation and Upgrade Guide.”
- For installing the exacqVision Driver see “C-CURE 9000 exacqVision Integration User Guide.”
